Scientist - Lentivirus and Adeno-Associated Virus (AAV)

OriGene is a gene centric research tool company dedicated to the support of gene functional study and drug discovery. OriGene develops molecular tools, proteins, and antibodies to facilitate life science research.

Position Summary:

Molecular Biology Department is seeking an experienced molecular biologist at the scientist level for R&D and manufacturing activities. This individual will be part of a group focusing on new product development and optimizing production of Lentivirus and Adeno-Associated Virus for OriGene's Lentivirus/AAV Program.

The qualified candidate will work both independently and as part of a team on virus production with the goal of improving the production and performance of viral particles.

Job Requirements:

- A Ph.D. degree in life science, preferably Lentivirus/AAV or molecular biology with 3+ years of experience in the fields of Lentivirus/AAV and molecular biology or related field. Industry experience preferred.
- Excellent experience with Lentiviral and/or adenoviral vectors and particles are a must.
- Experience with molecular biology and cell culture. Excellent molecular biology techniques are a strong plus.
- Experience with DNA cloning and vector construction.
- Experience with genome editing is preferred.
- Ability to generate innovative ideas for new products development. Derive information from multiple sources to design a research plan.
- Analysis of issues and data, drawing conclusions and taking actions based on these conclusions.
- Work independently, may direct work of others.
- Strong ability to perform multi-task under pressure.
- Must be highly organized and self-motivated.
- Good communication skills and team-player.
