

## ELISA Wash Buffer (10X)

<u>Catalog No.</u>	<u>Size</u>
AR100010	100 ml
AR100011	1 Liter

### Description

ELISA Wash Buffer is specifically formulated for washing microplates in standard ELISA assays and for washing beads in Luminex bead assays. It is a phosphate buffer based solution that contains salt, detergent, and a preservative.

### Appearance

Clear. Foam may appear when shaken.

### Form

Liquid, 10X Concentrate.

### Storage

Store at 4°C.

### Stability

Stable for a minimum of one year from date of receipt when stored at 4°C.  
1X working solution is stable for up to 4 weeks when stored at 4°C.

### Use and Handling

To prepare working solution, dilute to 1X with deionized or ultra-pure water. Mix thoroughly. Bring working solution to room temperature before use.

For microplate ELISA, add 200-300 µl Wash Buffer per well and then aspirate or decant thoroughly so that only 1-2 µl of liquid remains. Remove excess buffer by striking plate sharply on absorbent paper towels. Use 3-5 wash cycles after each assay incubation and 5-6 wash cycles before substrate addition.

For Luminex ELISA assays in filter plates, use 100-200 µl Wash Buffer per well. Vacuum gently and repeat 3-5 times after each assay incubation.

### Resources

ELISA and Luminex assay protocols are available in OriGene's ELISA Development Guide. ([www.origene.com/assets/documents/ELISA\\_guide.pdf](http://www.origene.com/assets/documents/ELISA_guide.pdf)).
