

CytoSections

An ideal alternate to control tissue
Verified, Reproducible, Renewable

CytoSections is a verified, reproducible and renewable source of positive control where the target protein is expressed in human HEK293T cells. The expression of the target protein is verified by a western blot.

Why Cytosections?

- ✓ Ready-to-use FFPE section of cell pellets expressing target protein
- ✓ Target protein expression verified by western blot
- ✓ Cultured cells making it easily renewable, reproducible
- ✓ Available for all human proteins
- ✓ Tagged with Myc-DDK, additional staining target
- ✓ Custom option available

CytoSections stained for CTLA4 with mouse-anti CTL4 monoclonal antibody (#UM800141)

CytoSection expressing CTLA4 (#TS413631) shows positive brown stain

CytoSection transfected with vector alone (negative control) shows no brown stain

Application

- ✓ New antibody screening
- ✓ Monitoring performance for everyday IHC runs
- ✓ Reference standard for multicenter studies
