Amyloid beta (1-42 specific) Mouse Monoclonal Antibody [Clone ID: 8G7]

Product data:

Product Type: Primary Antibodies

Clone Name: 8G7
Applications: IF

Recommended Dilution: Immunocytochemistry: 1-10 µg/ml.

Reactivity: Human
Host: Mouse
Isotype: IgG1

Clonality: Monoclonal

Immunogen: C-terminal of Amykoid beta A4 peptide conjugated to KLH.

Specificity: This antibody specifically interacts with the C-Terminus of beta-Amyloid (1-42) and does not

crossreact with beta-Amyloid (1-40).

Formulation: PBS containing 0.09% Sodium Azide, PEG and Sucrose

Label: FITC

State: Liquid purified IgG fraction

Concentration: lot specific

Purification: Size Exclusion Chromatography

Conjugation: FITC

Storage: Store the antibody (aliquote in liquid nitrogen) at -80°C.

Avoid repeated freezing and thawing.

Thaw aliquots at 37°C. Thawed aliquots may be stored at 2-8°C up to 3 months.

Stability: Shelf life: one year from despatch.

Background:

The beta-amyloid peptide (beta A4), proteolytically released from the amyloid precursor protein (APP), is the principal component of senile plaques in Alzheimer's disease. Cleavage of APP by alpha-secretase or alternatively by beta-secretase leads to generation and extracellular release of soluble APP peptides, S-APP-alpha and S-APP-beta, respectively, and the retention of corresponding membrane-anchored C-terminal fragments, C83 and C99. Subsequent processing of C83 by gamma-secretase yields P3 peptides. This is the major secretory pathway and is nonamyloidogenic. Alternatively, presenilin/nicastrin-mediated gamma-secretase processing of C99 releases the amyloid beta proteins, amyloid-beta 40 (Abeta40) and amyloid-beta 42 (Abeta42), major components of amyloid plaques, and the cytotoxic C-terminal fragments, gamma-CTF(50), gamma-CTF(57) and gamma-CTF(59).
