- Background:** Stress-activated Protein Kinases (SAPKs) are strongly activated in response to adverse stimuli such as heat and osmotic shock, UV light and other DNA-damaging reagents, and inhibitors of protein synthesis. They are also activated strongly in response to agonists that are released or produced under conditions of stress, such as proinflammatory cytokines. The SAPK1/jnk family consists of 3 isoforms: SAPK1 α /jnk2; SAPK1 β /jnk3; SAPK1 γ /jnk1.
- Synonyms:** Mitogen-activated protein kinase 8, c-Jun N-terminal kinase 1, JNK-46, JNK-1, PRKM8
