

Product datasheet for **AM02043PU-S**

Adiponectin (ADIPOQ) Mouse Monoclonal Antibody [Clone ID: M5-8(B)-H3]

Product data:

Product Type:	Primary Antibodies
Clone Name:	M5-8(B)-H3
Applications:	ELISA
Recommended Dilution:	ELISA.
Reactivity:	Human
Host:	Mouse
Clonality:	Monoclonal
Immunogen:	Recombinant human Adiponectin from E. coli
Specificity:	This antibody detects Adiponectin.
Formulation:	PBS pH 7,4 State: Purified State: Lyophilized IgG fraction
Reconstitution Method:	Restore in aqua bidest to 1 mg/ml.
Purification:	Protein G chromatography
Conjugation:	Unconjugated
Storage:	Store lyophilized at 2 - 8 °C and reconstituted at -20 °C. Avoid repeated freezing and thawing.
Stability:	Shelf life: One year from despatch.
Gene Name:	adiponectin, C1Q and collagen domain containing
Database Link:	Entrez Gene 9370 Human Q15848

Background:

Adipose cells produce and secrete numerous physiologically important proteins, such as Lipoprotein Lipase, Leptin, and Adipocyte Complement Related protein of 30 kDa, also known as Acrp30 or Adiponectin. Adiponectin is a circulating protein that is secreted exclusively by differentiated adipocytes. During adipocyte differentiation, Adiponectin mRNA is induced >100 fold. Adiponectin improves the ability of insulin to suppress glucose production, at sub physiological levels, thereby linking adipose tissue to whole body glucose regulation. Adiponectin function appears to be regulated by phosphatidylinositol 3 kinase (PI3K) since Adiponectin secretion is blocked by pharmacologic inhibitors of this kinase. Adiponectin mRNA is significantly reduced in adipose tissue of obese patients with Type 2 diabetes. The structural similarity of Adiponectin to TNF alpha suggests that Adiponectin may play a role in pathogenesis of insulin resistance in Type 2 diabetes. Adiponectin is implicated as a regulator of whole body energy homeostasis.

Synonyms:

ADIPOQ, ACDC, ACRP30, APM1, GBP28
