	IRF7 (1-150) Mouse Monoclonal Antibody [Clone ID: 3D9] – AM03127PU-N
Background:	Interferon Regulatory Factor 7 (IRF7) is a member of the interferon regulatory transcription factor family. IRF7 plays an essential role in virus-activated transcription of type I interferon alpha genes. Inducible expression of IRF7 is largely restricted to lymphoid tissue. Multiple IRF7 transcript variants have been identified, although the functional consequences of these have not yet been established.

Western blot analysis: Cell lysates of Jurkat (40 ug) were resolved by SDS-PAGE, transferred to NC membrane and probed with anti-human IRF7 antibody (1/1,000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
