Product datasheet for AM05275PU-N

LEF1 (alternate exon) Mouse Monoclonal Antibody [Clone ID: 1C3]

Product data:

| Product Type: | Primary Antibodies |
|-----------------------|---|
| Clone Name: | 1C3 |
| Applications: | WB |
| Recommended Dilution: | Western Blot: Detect LEF-1 protein containing the alternately spliced exon between amino acids 212-241 at 1-5 µg/ml. Positive Control: Cos cells transfected with LEF-1 protein. |
| Reactivity: | Human |
| Host: | Mouse |
| lsotype: | lgG1 |
| Clonality: | Monoclonal |
| Immunogen: | Recombinant full-length LEF-1 protein. |
| Specificity: | This antibody recognizes an epitope in amino acids 227-231 of LEF-1. This sequence lies within the context dependent activation domain of LEF-1 and appears to be an alternate splice variant exon of the LEF-1 gene. |
| Formulation: | PBS containing 0.08% Sodium Azide as preservative. State: Purified State: Liquid (sterile filtered) purified IgG fraction. |
| Concentration: | lot specific |
| Conjugation: | Unconjugated |
| Storage: | Store the antibody at -20°C. Avoid repeated freezing and thawing. |
| Stability: | Shelf life: One year from despatch. |
| Gene Name: | lymphoid enhancer binding factor 1 |
| Database Link: | <u>Entrez Gene 51176 Human</u> <u>Q9UJU2</u> |

CRIGENE LEF1 (alternate exon) Mouse Monoclonal Antibody [Clone ID: 1C3] – AM05275PU-N

Background:Lymphoid Enhancer Factor-1 (LEF-1) is an HMG 1/2-like DNA binding/bending protein and is a
member of the LEF/TCF transcription factor family. There are four LEF/TCF family members in
mammalian systems (LEF-1, TCF-1, TCF-3 and TCF-4), and orthologs to these factors have
been identified in many different species. LEF/TCFs are downstream mediators of
Wnt/Wingless signals. Wnt signaling drives cell polarity, cell fate and cell growth decisions in
embryonic tissues and in post-natal tissues that continue to develop from mitotically active
stem cell precursors. Misregulation of Wnt signaling is also implicated as a root cause of
many different cancers, such as colon cancer, melanoma, breast cancer, prostate cancer and
others.

Synonyms: Lymphoid enhancer-binding factor 1, LEF-1, T cell-specific transcription factor 1-alpha, TCF1alpha
