CD51 / ITGAV Rat Monoclonal Antibody [Clone ID: RMV-7]

Product data:

Product Type: Primary Antibodies

Clone Name: RMV-7

Applications: FC

Recommended Dilution: Flow Cytometry: 1/10.

Reactivity: Mouse Host: Rat

Host: Rat Isotype: IgG1

Clonality: Monoclonal

Immunogen: cultured LAK cells from Balb/c mice.

Specificity: This antibody recognises CD51. The RMV-7 antibody has been reported to block binding of

CD51 to vitronectin, fibronectin, and CD31 in some cell types, as well as blocking LAK cell

cytotoxicity.

Formulation: Phosphate buffered saline pH7.4 containing 0,09% sodium azide

Label: PE

State: Lyophilised purified IgG Label: R. Phycoerythrin (RPE)

Reconstitution Method: Reconstitute with 1ml distilled water

Concentration: lot specific

Purification: Affinity chromatography on Protein G

Conjugation: PE

Storage: Prior to and following reconstitution store the antibody at 2-8°C.

DO NOT FREEZE!

This product is photosensitive and should be protected from light.

Stability: Shelf life: one year from despatch.

Gene Name: integrin alpha V

Database Link: Entrez Gene 16410 Mouse

P43406

CD51 / ITGAV Rat Monoclonal Antibody [Clone ID: RMV-7] - AM05569RP-N

Background:

CD51 is a 140 kD alpha subunit of the vitronectin receptor, which is otherwise known as the intergrin alpha v chain. CD51 can form heterodimers at the cell surface with a variety of beta integrins including CD29 and CD61. Heterodimers of CD51/CD61 functions as a receptor for vitronectin, and a wide array of RGD-containing proteins including fibronectin, fibrinogen, von Willebrand factor, laminin, thrombospondin and osteopontin. CD51/CD61 is primarily expressed on myeloid cells and activated T-cells. Alpha-V integrins may play a role in embryo implantation, angiogenesis and wound healing.

Synonyms:

Integrin alpha-V, MSK8, VNRA, Vitronectin receptor subunit alpha
