Entrez
Protein NP_003912. It is a protein containing a caspase recruitment domain (CARD). It plays
an important role in apoptosis and activating NF-kappaB. The research suggested that it
interacted with other CARD domain containing proteins including CARD9, 10, 11 and 14,
which were thought to function as upstream regulators in NF-kappaB signaling. Bcl-10 is
found to form a complex with MALT1 which encoded by another gene known to be
translocated in MALT lymphoma. MALT1 and Bcl-10 are thought to synergize in the activation
of NF-kappaB, and the deregulation of either of them may contribute to the same

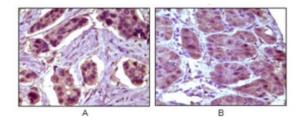

pathogenetic process that leads to the malignancy.
