SORIGENE FOXD3 Mouse Monoclonal Antibody [Clone ID: 5G9] – AM06554SU-N

Background:FoxD3 is a member of the Forkhead Box family and is characterized by a winged-helix DNA-
binding structure and the important role it plays in embryonic development . This
transcriptional regulator is required for the maintenance of pluripotency in the pre-
implantation and peri-implantation stages of mouse embryonic development and is also
required for trophoblast formation. FoxD3 is required for the maintenance of the mammalian
neural crest; FoxD3(-/-) mouse embryos fail around the time of implantation with loss of
neural crest-derived structures. FoxD3 also forms a regulatory network with Oct-4 and
NANOG to maintain the pluripotency of ES cells. Promotes development of neural crest cells
from neural tube progenitors. Restricts neural progenitor cells to the neural crest lineage
while suppressing interneuron differentiation. Required for maintenance of pluripotent cells
in the pre-implantation and peri-implantation stages of embryogenesis. Tissue specificity:
Expressed in chronic myeloid leukemia, Jurkat T-cell leukemia and teratocarcinoma cell lines,
but not in any other cell lines or normal tissues examined.

Synonyms:

Forkhead box protein D3
