	Klra6 Mouse Monoclonal Antibody [Clone ID: HBF-719] – AM08066RP-N
Background:	Ly49F is a member of the lectin like homodimeric Ly49 family of cell surface receptors. (Ref.1) Mouse Ly49 receptors exhibit allelic specificity for MHC class I la molecules and are thought to serve to prevent natural killer (NK) cells from attacking normal cells, while allowing them to attack infected or transformed cells in which class I molecules have been down regulated. (Ref.2) These inhibitory receptors are also expressed on a subpopulation of mouse CD8+ T cells.
Synonyms:	Ly-49f, Ly49-f, Ly49F
