	CD45 / LCA (CD45RC) Rat Monoclonal Antibody [Clone ID: C455.1F] – AM08070FC-S
Background:	The CD45 family of cell surface glycoprotein antigens exist as a set of isoforms. (Ref.1-4) The patterns of monoclonal antibody recognition of the CD45 phenotypes can be restricted (CD45RA, RB and RC), or broader, such as the CD45 T 200 species (See also products AM08044). (Ref.1-4)The "restricted" subsets of this group arise as a result of translation of alternatively spliced mRNAs from exons A, B and C (exons 4, 5 and 6), where exons 3-15 encode the extracellular domain of the CD45 molecule. The restricted epitopes are differentially expressed on T and B lymphocytes, including functionally distinct T cells. CD45 (LCA) is a transmembrane phosphotyrosine phosphatase expressed on leucocytes. Myeloid cells do not express the RC isoform.
Synonyms:	PTPRC, Leukocyte common antigen, L-CA, T200
