

Product datasheet for AM08080LE-N

H2-D1 Mouse Monoclonal Antibody [Clone ID: 28-14-8]

Product data:

Product Type: Primary Antibodies

Clone Name: 28-14-8

Applications: FC

Recommended Dilution: Flow Cytometry: < / = 1 μ g/10e6 cells.

Immunohistochemistry on Frozen Tissue Sections.

Complement-mediated cytotoxicity.

Reactivity: Mouse
Host: Mouse
Isotype: IgG2a

Clonality: Monoclonal

Immunogen: C3H.SW mouse splenocytes. (Ref.1,2)

Specificity: This antibody is specific to an epitope in the alpha 3 domain of H-2Db. It binds to the alpha 3

domain of H-2Db in the presence or absence of beta 2 microglobulin. (Ref.7,8) It cross reacts

with the alpha 3 domain of H-2Ld, but not Kd or Dd, and with H-2Dq and/or Lq.

The antibody has been shown to block H-2Ld-specific and H-2Ld-restricted antigen-specific lysis of target cells by cytotoxic T lymphocytes, (Ref.9-11) but it does not block recognition of

H-2Ld-positive target cells by Ly-6G2-positive NK cells. (Ref.12).

Customer feedback: Clone 28-14-8 does not cross-react with human cells.

Formulation: PBS without preservatives.

State: Low Endotoxin

State: Liquid purified Ig fraction.

Concentration: lot specific

Conjugation: Unconjugated

Storage: Store the antibody undiluted (in aliquots) at -20°C.

Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: histocompatibility 2, D region locus 1

H2-D1 Mouse Monoclonal Antibody [Clone ID: 28-14-8] - AM08080LE-N

Database Link: Entrez Gene 14964 Mouse

P01899

Background: The 'classical' MHC Class I molecules are histocompatibility antigens encoded by the H-2 gene

complex and consist of heterodimers of highly polymorphic alpha chains noncovalently associated with the invariant beta 2-Microglobulin. (Ref.3,4) These antigens are expressed on most nucleated cells but expression varies on different cell types. MHC Class I molecules present endogenously synthesized peptides to CD8+ T lymphocytes, which are usually

cytotoxic T cells. (Ref.5)

Synonyms: H-2D(B), H2-D1
