CD8 Mouse Monoclonal Antibody [Clone ID: EP72] - AM08138FC-NBackground:The CD8 antigen is a cell surface glycoprotein found on most cytotoxic T lymphocytes that
mediates efficient cell to cell interactions within the immune system. The CD8 antigen, acting
as a coreceptor, and the T cell receptor on the T lymphocyte recognize antigen displayed by
an antigen presenting cell (APC) in the context of class I MHC molecules. The functional
coreceptor is either a homodimer composed of two alpha chains, or a heterodimer
composed of one alpha and one beta chain. Both alpha and beta chains share significant
homology to immunoglobulin variable light chains. CD8 is expressed on most thymocytes
and approximately 1/3 of peripheral blood T cells in humans. CD8 alpha/beta heterodimers
are expressed on alpha/beta and gamma/delta T cells and some NK cells in humans. The pattern
of expression in other species has not been well documented.

Synonyms: CD8 alpha chain, CD8A, MAL
