## Product datasheet for AM08139RP-N

## LOC396098 (Bu1a + Bu1b) Mouse Monoclonal Antibody [Clone ID: AV20]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	AV20
Applications:	FC
Recommended Dilution:	<b>Flow Cytometry:</b> < / = 0.2 µg/10e6 cells. (Ref.2)
Reactivity:	Chicken
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Bursal cells from one-day-old H.B15 (Bu-1a/b) strain chickens. (Ref.1)
Specificity:	This antibody recognizes a monomorphic determinant on the Bu-1 B cell associated alloantigens of both RPL 6(3) (Bu-1a) and 7(2) (Bu-1b) lines of inbred chickens. It also identifies B cells in partially inbred birds. Bu-1 is found on 85-90% of bursal cells, 2-8% of thymocytes, 15-27% of spleen cells, and 2-18% of peripheral blood cells. It is also expressed on subsets of macrophages and monocytes, but not on granulocytes, erythrocytes or thrombocytes. (Ref.1-2) No Cross reactivity is observed with Turkey cells when analyzed by Immunofluorescent staining and Flow Cytometry.
Formulation:	PBS containing 0.09% Sodium Azide as preservative and a stabilizing agent. Label: PE State: Liquid purified Ig fraction. Label: R-Phycoerythrin
Concentration:	lot specific
Conjugation:	PE
Storage:	Store the antibody undiluted at 2-8°C. <b>DO NOT FREEZE!</b> This product is photosensitive and should be protected from light. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Gene Name:	B6.1

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	LOC396098 (Bu1a + Bu1b) Mouse Monoclonal Antibody [Clone ID: AV20] – AM08139RP-N
Database Link:	<u>Entrez Gene 396098 Chicken</u> <u>Q90746</u>
Background:	The Bu1 [chB6] molecule is expressed on chicken B cells throughout most of their development, as well as on some non lymphoid cells. It has long been used as an allotypic marker in important studies of B cell development, though its function is unknown. It has no recognizable similarity to known mammalian molecules and thus represents a unique B cell marker. Its presence in chickens may be related to differences in the properties of B cell development between chickens and mammalian species. The sequences of the different alleles of this gene revealed a higher level of polymorphism than expected. A restriction fragment length polymorphism linked to the CHB6 gene has been used to determine its location on the linkage map of the chicken genome, which will allow the definitive evaluation of reported associations with disease resistance.
Synonyms:	B-Cell Marker
