Background:	CD44 is a type 1 transmembrane glycoprotein also known as Phagocytic Glycoprotein 1 (pgp 1) and HCAM. CD44 is the receptor for hyaluronate and exists as a large number of different isoforms due to alternative RNA splicing. The major isoform expressed on lymphocytes, myeloid cells, and erythrocytes is a glycosylated type 1 transmembrane protein. Other isoforms contain glycosaminoglycans and are expressed on hematopoietic and non hematopoietic cells. CD44 is involved in adhesion of leukocytes to endothelial cells, stromal cells, and the extracellular matrix.

Immunofluorescent Staining: Chicken peripheral blood mononuclear cells were double stained with Mouse anti-Chicken CD44-PE and Mouse anti-Chicken Beta-2 Microglobulin. Lymphocytes were gated and analyzed on a FACScan (TM) flow cytometer (BDB, San Jose, CA).
