The Wnt gene family is representative of a growing class of multifunctioanl factors tha play a role in both tumorigenesis and patterning events required for normal differentiation and development. Wnt3a is a ligand for members of the frizzled family of seven transmembrane receptors.

The lysates of A549 (20ug) were resolved by SDS-PAGE, transferred to NC membrane and probed with anti-human Wnt3a (1:1000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.

Human breast cancer tissue

Paraffin embedded sections of human breast cancer tissue were incubated with anti-human Wnt3a (1:50) for 2 hours at room temperature. Antigen retrieval was performed in 0.1M sodium citrate buffer and detected using Diaminobenzidine (DAB)
