Background:

Retinol binding protein 4(RBP4) belongs to the lipocalin family and is the specific carrier for retinol in the blood. This protein was found to be expressed and secreted by adipose tissue, and was strongly associated with insulin resistance. It delivers retinol from the liver stores to the peripheral tissues. In plasma, the RBP-retinol complex interacts with transthyretin which prevents its loss by filtration through the kidney glomeruli.

Synonyms:

RBP-4, Retinol-binding protein 4, Plasma retinol-binding protein, PRBP, RBP

Protein Families:

Druggable Genome, Secreted Protein

Western blot analysis: Cell lysates of HepG2 (60 ug) were resolved by SDS-PAGE, transferred to NC membrane and probed with anti-human RBP4 (1:500). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.

Human gastric cancer tissue

Paraffin embedded sections of human gastric cancer tissue were incubated with anti-human RBP4 (1:25) for 2 hours at room temperature. Antigen retrieval was performed in 0.1M sodium citrate buffer and detected using Diaminobenzidine (DAB)
