	LITAF Mouse Monoclonal Antibody [Clone ID: AT5C10] – AM09081PU-S
Background:	Lipopolysaccharide-induced tumor necrosis factor-alpha factor (LITAF) mediates the expression of inflammatory cytokines such as TNF-alpha in Lipopolysaccharide-induced processes. LITAF binds to STAT6B, a member of the STAT6 family forming a complex on the TNF-alpha promoter that modulates TNF activity. High levels of expression of LITAF mRNA have been observed predominantly in the placenta, peripheral blood leukocytes, lymph nodes and spleen.
Synonyms: Protein Families	LITAF, PIG7, SIMPLE, LPS-induced TNF-alpha factor, p53-induced gene 7 protein Druggable Genome, Transcription Factors

### **Product images:**

Cell lysates of HeLa (20ug) were resolved by SDS-PAGE, transferred to NC membrane and probed with anti-human LITAF (1:2000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
