Background: Ribonuclease inhibitor 1 (RNH1) the placental ribonuclease inhibitor, is an acid protein with a molecular weight of 50 kDa. RNH1 is a member of a family of proteinaceous cytoplasmic RNase inhibitors that are expressed in many tissues and bind to both intracellular and extracellular RNases in the cytosol. RNH1 is a role in abolishing the ribonucleolytic and angiogenic activities of angiogenin.

Synonyms: Ribonuclease/angiogenin inhibitor 1, RAI, RNH, PRI

The extracts of mouse liver (20ug) were resolved by SDS-PAGE, transferred to NC membrane and probed with anti-human RNH1 (1:1000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
