

Product datasheet for **AM26704RP-N**

Mouse IgG2b Isotype Control

Product data:

Product Type:	Isotype Controls
Applications:	FC
Host:	Mouse
Isotype:	IgG2b
Clonality:	Monoclonal
Immunogen:	KLH-coupled trinitrophenol
Specificity:	The reagent is intended as isotype control for flow cytometry analysis to establish the amount of non-specific antibody binding.
Buffer:	Phosphate buffered saline (PBS)
Concentration:	0.1 mg/ml
Conjugation:	PE
Storage:	Store undiluted at 2-8°C. DO NOT FREEZE! Avoid prolonged exposure to light. Shelf life: one year from despatch.

Background: The specificity of staining by monoclonal antibodies to target antigens should be verified by establishing the amount of non-specific antibody binding. Especially at higher concentration (more than 15 µg/ml) the antibody staining usually has considerable background. To this end a non-reactive immunoglobulin of the same isotype is included as a negative control for each specific monoclonal antibody used in a particular immunoassay. The monoclonal antibody MPC-11 was generated against an epitope irrelevant for human, mouse, and rat material, and can thus be used for evaluation of the background staining that is caused by general nonspecific interactions between an mouse IgG2b molecule and the respective sample under the particular conditions. This shall help the customer to set up the experimental conditions so that the nonspecific binding of any antibody is abolished.
