## CD30 (TNFRSF8) Mouse Monoclonal Antibody [Clone ID: Ber-H8]

#### **Product data:**

**Product Type:** Primary Antibodies

Clone Name: Ber-H8
Applications: FC, IHC

Recommended Dilution: Flow cytometry.

Immunohistochemistry (paraffin sections). Immunohistochemistry (frozen sections).

Reactivity: Human
Host: Mouse
Isotype: IgG1

Clonality: Monoclonal

**Specificity:** This antibody recognizes extracellular part of CD30 (Ki-1 antigen), a 105 kDa single chain

glycoprotein expressed on Hodgkin's and Reed-Sternberg cells; it is also found in Burkitt's lymphomas, virus-infected T and B lymphocytes, and on normal B and T lymphocytes after activation (T lymphocytes that produce Th2-type cytokines and on CD4+/CD8+ T lymphocytes

that co-express CD45RO and the IL4 receptor).

Formulation: Phosphate buffered saline (PBS) with 15 mM sodium azide, approx. pH 7.4

State: Purified

State: Liquid Ig fraction

**Concentration:** lot specific

**Purification:** Protein-A affinity chromatography (> 95% pure by SDS-PAGE)

Conjugation: Unconjugated

Storage: Store undiluted at 2-8°C.

DO NOT FREEZE!

**Stability:** Shelf life: one year from despatch.

**Gene Name:** tumor necrosis factor receptor superfamily member 8

**Database Link:** Entrez Gene 943 Human

P28908

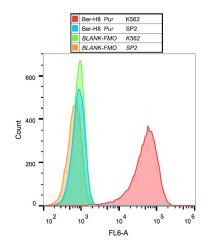

#### Background:

CD30 is a type I transmembrane glycoprotein of the TNF receptor superfamily. CD30 was originally identified as a cell surface antigen of Hodgkins and Reed-Sternberg cells using monoclonal antibody Ki-1. The ligand for CD30 is CD30L (CD153). The binding of CD30 to CD30L mediates pleiotropic effects including cell proliferation, activation, differentiation, and apoptotic cell death. CD30 has a critical role in the pathophysiology of Hodgkin's disease and other CD30+ lymphomas. CD30 acts as a costimulatory molecule in thymic negative selection. In addition to its expression on Hodgkin's and Reed-Sternberg cells, CD30 is also found in some non-Hodgkin's lymphomas (including Burkitt's lymphomas), virus-infected T and B cells, and on normal T and B cells after activation. In T cells, CD30 expression is present on a subset of T cells that produce Th2-type cytokines and on CD4+/CD8+ thymocytes that co-express CD45RO and the IL4 receptor. Soluble form of CD30 (sCD30) serves as a marker reflecting Th2 immune response.

Synonyms: TNFRSF8, D1S166E, CD30L receptor, KI-1 antigen
