

Product datasheet for **AM31843HR-N**

Uromuroid (UMOD) Mouse Monoclonal Antibody [Clone ID: 10.32]

Product data:

Product Type: Primary Antibodies

Clone Name: 10.32

Applications: ELISA, IF, IHC, R

Recommended Dilution: **ELISA:** 1/2000-1/4000.

THP was bound to the wells of a microtitre plate, and sequential dilutions of antibody were added to the wells. After incubation and washing, alkaline phosphatase conjugated anti-mouse Ig was added to the wells. Colour reaction was developed and scored as intense (4+) to none (-). The titre is defined as the maximum dilution yielding a 4+ reaction.

Immunofluorescence.

Radioimmunoassay.

Immunohistochemistry on Frozen Sections.

Immunohistochemistry on Formalin, Fixed, Paraffin Embedded Sections.

Positive Control: Human Kidney.

It can also be used to purify THP by binding to a solid phase.

Reactivity: Canine, Human

Host: Mouse

Isotype: IgG2b

Clonality: Monoclonal

Immunogen: Human Tamm-Horsfall protein.

Specificity: Anti-Human Tamm-Horsfall protein (THP) is a monoclonal antibody which reacts with an epitope of the urinary mucoprotein.

This monoclonal antibody has shown good localization to the distal tubule and collecting duct as well as to large deposits of Tamm-Horsfall protein which has clogged peri-pelvic veins.

This antibody has been tested against 21 different Human proteins in Solid Phase

Radioimmunoassay and has been shown to be specific for Tamm-Horsfall protein only.

Results of ELISA show no visible reaction with Human albumin or transferrin. Also no staining of Human tissue other than that noted for kidney sections has been observed.

Formulation:	PBS containing 50% Glycerol (v/v). Label: HRP State: Liquid purified Ig fraction. Stabilizer: 4-5 mg/mL BSA Label: Horseradish Peroxidase
Concentration:	lot specific
Purification:	Protein G Chromatography.
Conjugation:	HRP
Storage:	Store the antibody undiluted at (in aliquots) at -20°C. This product is photosensitive and should be protected from light. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Gene Name:	uromodulin
Database Link:	Entrez Gene 7369 Human P07911
Background:	Tamm-Horsfall Protein (THP) is a glycoprotein of approximately 80 kDa containing up to 25% carbohydrate by weight. It exists as a high molecular weight polymer in urine and approximately 50 mg of the THP are excreted per day by adult humans. THP is produced by the epithelial cells lining the thick ascending loop of Henle and distal convoluted tubules of the kidney. THP is also the primary constituent of renal tubular casts and THP aggregation has been implicated as a factor in the pathogenesis of acute renal failure by causing tubular obstruction. Antibody to THP is present in the serum of patients with pyelonephritis and reflux uropathy.
Synonyms:	Tamm-Horsfall urinary glycoprotein, THP
