--	--

Background:S100A7 is 11 kilo-dalton calcium binding protein with 2 EF motifs. It is also called psoriasin<br/>due to its significantly elevated level in the skin lesion of psoriasis. The protein is over-<br/>expressed in squamous cell tumors of the skin, lung and breast. S100A7 expression is<br/>induced after activation of epidermal growth factor receptor.

Synonyms: S100-A7, S100A7C, PSOR1
