Background:	Diamine Oxidase belongs to the copper/topaquinone oxidase family. Catalyzes the degradation of compounds such as putrescine, histamine, spermine, and spermidine, substances involved in allergic and immune responses, cell proliferation, tissue differentiation, tumor formation, and possibly apoptosis. Placental DAO is thought to play a role in the regulation of the female reproductive function.
Synonyms:	Diamine oxidase, AOC1, DAO1, Amiloride-binding protein, Histaminase, Kidney amine oxidase
