Product datasheet for AM33288PU-T

Bromodeoxyuridine / BrDU Mouse Monoclonal Antibody [Clone ID: SPM537]

Product data:

Product Type:	Primary Antibodies	
Clone Name:	SPM537	
Applications:	FC, IF, IHC	
Recommended Dilution:	 Flow Cytometry: 0.5-1 μg/10⁶ cells. Immunofluorescence: 0.5-1 μg/ml. Immunohistochemistry on Frozen and Formalin-Fixed Sections: 0.5-1 μg/ml for 30 minutes at RT. For staining of formalin-fixed tissues, incubate sections in 4N HCl for 30 minutes at RT followed by digestion with trypsin at 1mg/ml PBS, 10 min at 37°C. Recommended Positive Control: Cells grown in presence of BrdU or tissues from experimental animals injected with BrdU. 	
Reactivity:	All Species	
Host:	Mouse	
lsotype:	lgG1	
Clonality:	Monoclonal	
Immunogen:	Bromodeoxyuridine (BrdU) conjugated to KLH	
Specificity:	It reacts with Bromodeoxyuridine (BrdU) in single stranded DNA (produced by partial denaturation of double stranded DNA), BrdU coupled to a protein carrier, as well as free BrdU. BrdU is a thymidine analog, incorporated into cell nuclei during DNA synthesis prior to mitosis. Antibody to BrdU is helpful in detecting S-phase cells, providing useful information on the aggressiveness of tumors. <i>Cellular Localization:</i> Nuclear.	
Formulation:	10mM PBS State: Purified State: Liquid purified IgG fraction from Bioreactor Concentrate Stabilizer: 0.05% BSA Preservative: 0.05% Sodium Azide	
Concentration:	lot specific	
Purification:	Protein A/G Chromatography	

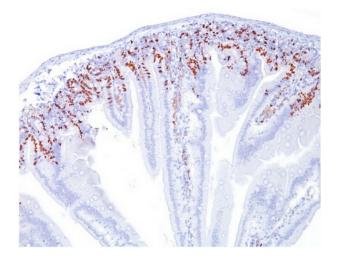

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Bromodeoxyuridine /	BrDU Mouse Monoclonal Antibody [Clone ID: SPM537] – AM33288PU-T
--	---------------------	---

Conjugation: Storage:	Unconjugated Store undiluted at 2-8°C. DO NOT FREEZE!
Stability:	Shelf life: one year from despatch.
Predicted Protein Size:	Depends on the target
Background:	Bromodexyuridine (BrdU) is a thymidine analog which is selectively incorporated into the DNA of proliferating cells to provide a marker for the DNA being replicated. The number of proliferating cells can then be detected in cell lysates, tissue sections or suspensions using an antibody specific for the BrdU. Previous methods of detecting DNA included the use of [3H]-thymidine which would be incorporated into the DNA and could then the DNA could be quantified by autoradiography or scintillation counting. These methods are more difficult and require more cleanup due to the radioactive material. An immunohistochemical assay provides a much simpler and cleaner method for detecting DNA in cells.
