

Product datasheet for AM33353PU-S

c-Myc (MYC) Mouse Monoclonal Antibody [Clone ID: MYC699]

Product data:

Product Type: Primary Antibodies Clone Name: MYC699 Applications: FC, IF, IHC, IP, WB Recommended Dilution: ELISA: Use BSA free Antibody for coating. **Flow Cytometry:** 0.5-1 µg/million cells. Immunofluorescence: 1-2 µg/ml. Western Blotting: 0.5-1 µg/ml. **Immunoprecipitation:** 1-2 µg/500 µg protein lysate. Immunohistochemistry on Frozen Sections: 0.5-1.0 µg/ml for 30 minutes at RT. Positive Control: HL-60 cells or breast carcinoma. **Reactivity:** Chimpanzee, Gorilla, Human Host: Mouse Isotype: lgG1 **Clonality:** Monoclonal A synthetic peptide, corresponding to aa 408-439 (AEEQKLISEEDLLRKRREQLKHKLEQL-RNSCA) Immunogen: from C-terminus of Human c-myc, coupled to KLH. Specificity: Recognizes c-Myc Oncoprotein. Cellular Localization: Nuclear. Formulation: 10mM PBS State: Purified State: Liquid purified IgG fraction from Bioreactor Concentrate Stabilizer: 0.05% BSA Preservative: 0.05% Sodium Azide **Concentration:** lot specific **Purification:** Protein A/G Chromatography **Conjugation:** Unconjugated Store undiluted at 2-8°C. Storage: Stability: Shelf life: one year from despatch.

CRIGENE c-Myc (MYC) Mouse Monoclonal Antibody [Clone ID: MYC699] – AM33353PU-S

Predicted Protein Size: Gene Name: Database Link:	62-64 kDa v-myc avian myelocytomatosis viral oncogene homolog <u>Entrez Gene 4609 Human</u> <u>P01106</u>
Background:	The c-Myc protein is a transcription factor, which is encoded by the c-Myc gene on human chromosome 8q24. c-Myc is commonly activated in a variety of tumor cells and plays an important role in cellular proliferation, differentiatio n, apoptosis and cell cycle progression. The phosphorylation of c-Myc has been investigated and previous studies have suggested a functional association between phosphorylation at Thr58/ Ser62 by glycogen synthase kinase 3, cyclin dependent kinase, ERK2 and C-Jun N terminal Kinase (JNK) in cell proliferation and cell cycle regulation. Studies also have shown that c -Myc is essential for tumor cell development in vasculogenesis and angiogenesis that distribut e blood throughout the cells, and which brought extensive attention in the development of new therapeutic approach for cancer treatment.
Synonyms:	Transcription factor p64, BHLHE39
