GIPC (GIPC2) Mouse Monoclonal Antibody [Clone ID: AT1G10] - AM50008PU-N GIPC, GAIP interacting protein at the C terminus, is a PDZ domain containing protein that interacts with RGS-GAIP. GIPC was also identified as TIP-2, a protein that interacts with the viral oncoprotein TAX, which transactivates viral and cellular promoters through interactions with various transcription factors. GIPC specifically localizes to clusters of vesicles near the plasma membrane and participates in G protein-coupled signaling pathway involved in regulating clathrin-coated vesicular trafficking. GIPC also associates with membrane bound semaphorin F (M-SemF), which is involved in neuronal axon growth, and it appears to regulate the subcellular distribution of M-SemF in the brain.

The cell lysates (40ug) were resolved by SDS-PAGE, transferred to PVDF membrane and probed with anti-human GIPC antibody (1:1000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system. The cross-reacting of antihuman GIPC (AT1G10) were analyzed by using recombinant protein (20ng) of GIPC1 and GIPC2.
