Background: CISD1 (CDGSH iron-sulfur domain-containing protein 1) is 108 amino acid protein. CISD1 plays a key role in regulating maximal capacity for electron transport and oxidative phosphorylation. May be involved in Fe-S cluster shuttling and/or in redox reactions. This protein expression is reduced in cells derived from cystic fibrosis patients.

Synonyms: C10orf70, ZCD1, MDS029, MitoNEET

Protein Families: Transmembrane

Western Blot: The extract of Mouse liver (40ug) were resolved by SDS-PAGE, transferred to PVDF membrane and probed with anti-human CISD1 antibody (1/1000). Proteins were visualized using a goat anti-mouse secondary antibody.
