	alpha Synuclein (SNCA) Mouse Monoclonal Antibody [Clone ID: AT1E10] – AM50030PU-S
Background:	Alpha-synuclein (amino acids 1-140), an acidic neuronal protein of 140 amino acids, is extremely heat-resistant and is natively unfolded with an extended structure primarily composed of random coils. alpha-synuclein has been suggested to be implicated in the pathogenesis of Parkinson's disease and related neurodegenerative disorders, and more recently, to be an important regulatory component of vesicular transport in neuronal cells.
Synonyms:	NACP, PARK1
Protein Families	: Druggable Genome
Protein Pathway	/s: Alzheimer's disease, Parkinson's disease

Product images:

The recombinant human synuclein family (alpha-, beta- and gamma-) proteins (100ng) were resolved by SDS-PAGE, transferred to PVDF membrane and probed with anti-human alphasynuclein antibody (1:500). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
