Background:

CIAO1 is an essential component of the cytosolic iron-sulfur (Fe/S) protein assembly machinery. It is a multiprotein complex that mediates the incorporation of iron-sulfur cluster into extramitochondrial Fe/S proteins. CIAO1 seems to specifically modulate the transactivation activity of WT1 and may function to regulate the physiological functions of WT1 in cell growth and differentiation. As part of the mitotic spindle-associated MMXD complex, it may play a role in chromosome segregation.

Synonyms:

CIA1; WDR39

Protein Families:

Transcription Factors

The cell lysate of Jurkat (30ug) were resolved by SDS-PAGE, transferred to PVDF membrane and probed with anti-human CIAO1 antibody (1:1000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
