Product datasheet for AM50071PU-N

Signal sequence receptor delta (SSR4) Mouse Monoclonal Antibody [Clone ID: AT26G5]

Product data:

Product Type:	Primary Antibodies	
Clone Name:	AT26G5	
Applications:	ELISA, WB	
Recommended Dilution:	The antibody has been tested by ELISA, Western blot analysis to assure specificity and reactivity. Since application varies, however, each investigation should be titrated by the reagent to obtain optimal results. Recommended starting dilution is 1:1000.	
Reactivity:	Human	
Host:	Mouse	
lsotype:	lgG1	
Clonality:	Monoclonal	
Immunogen:	Recombinant human SSR4 (24-144aa) purified from E. coli	
Formulation:	PBS, pH 7.4 containing 0.02% Sodium Azide and 10% Glycerol State: Purified State: Liquid purified Ig fraction	
Concentration:	lot specific	
Purification:	Protein-A affinity chromatography	
Conjugation:	Unconjugated	
Storage:	Store undiluted at 2-8°C for up to two weeks or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.	
Stability:	Shelf life: one year from despatch.	
Gene Name:	signal sequence receptor subunit 4	
Database Link:	<u>Entrez Gene 6748 Human</u> <u>P51571</u>	

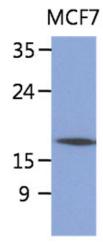

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Signal sequence receptor delta (SSR4) Mouse Monoclonal Antibody [Clone ID: AT26G5] – AM50071PU-N
Background:	SSR4, also called TRAPD, is assumed to be involved in protein secretion. It is located in the Xq28 region, arranged in a compact head-to-head manner with the IDH3G gene. These two genes are driven by a bidirectional promoter located between them, and encode proteins involved in unrelated biochemical pathways located in different compartments of the cell. The nontranscribed intergenic region represents only 133 bp and is embedded in a CpG island. The CpG island functions as a bidirectional promoter to initiate the transcription of both functionally unrelated genes with distinct expression patterns. SSR4 consists of six exons and is approximately 70 kb telomeric to the ALD gene. Although alternative splicing of exon 5 has not been detected in human SSR4, transcript variants missing the region homologous to human exon 5 have been detected in both Xenopus laevis and Mus musculus.

Synonyms:	SSR-delta, TRAP-delta
Protein Families:	Druggable Genome

Protein Families:

Product images:

The lysate of MCF7 (40ug) were resolved by SDS-PAGE, transferred to PVDF membrane and probed with anti-human SSR4 antibody (1:1000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
