**Predicted Protein Size:** 75 kDa

**Gene Name:** tyrosinase related protein 1

**Database Link:** [Entrez Gene 7306 Human P17643](#)

**Background:** Tyrosinase-related protein-1 (TRP-1) is involved in melanin synthesis. TRP1 is present on the melanosomal membranes of melanoma, normal melanocytes and nevi. Recent evidence suggests that TRP-1 is involved in maintaining stability of tyrosinase protein and modulating its catalytic activity. TRP-1 is also involved in maintenance of melanosome ultrastructure and affects melanocyte proliferation and cell death.

**Synonyms:** Tyrosinase-related protein 1, TYRP, TYRRP, TRP-1, TRP1, DHICA oxidase, Catalase B, CAS2
