Background: Tyrosinase-related protein-1 (TRP-1) is involved in melanin synthesis. TRP1 is present on the melanosomal membranes of melanoma, normal melanocytes and nevi. Recent evidence suggests that TRP-1 is involved in maintaining stability of tyrosinase protein and modulating its catalytic activity. TRP-1 is also involved in maintenance of melanosome ultrastructure and affects melanocyte proliferation and cell death.

Synonyms: Tyrosinase-related protein 1, TYRP, TYRRP, TRP-1, TRP1, DHICA oxidase, Catalase B, CAS2
