	14 3 3 gamma (YWHAG) Mouse Monoclonal Antibody [Clone ID: AT4B9] – AM50336PU-N
Background:	The 14-3-3 family of proteins plays a key regulatory role in signal transduction, checkpoint control, apoptotic and nutrient-sensing pathways. 14-3-3 proteins are highly conserved and ubiquitously expressed. There are at least seven isoforms, Beta, Gamma, Epsilon, Delta, Zeta, Tau and Eta that have been identified in mammals. The 14-3-3 gamma, a subtype of the 14-3-3 family of proteins, was thought to be brain and neuron-specific. It has been shown to interact with RAF1 and protein kinase C, proteins involved in various signal transduction pathways.
Synonyms:	YWHAG, KCIP-1
Protein Families	Druggable Genome
Protein Pathway	s: Cell cycle, Neurotrophin signaling pathway, Oocyte meiosis
