Background:	CREG1 activity may contribute to the transcriptional control of cell growth and differentiation. Antagonizes transcriptional activation and cellular transformation by the adenovirus E1A protein. CREG1 is broadly expressed in adult tissues and is regulated during embryonic development. CREG1 is a secreted glycoprotein which enhances differentiation of mouse embryonic stem cells and human NTERA-2 cells.

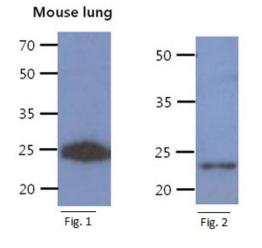

Fig. 1: The tissue extract of mouse lung (40ug) were resolved by SDS-PAGE, transferred to PVDF membrane and probed with anti-human CREG1 antibody (1:1000). Proteins were visualized using a goat anti-mouse secondary antibody conjugated to HRP and an ECL detection system.
