## **Streptococcus Group A Rabbit Polyclonal Antibody**

**Product data:** 

**Product Type:** Primary Antibodies

**Applications:** ELISA, IF, LF

Recommended Dilution: ELISA.

IFA.

Lateral flow immunoassays.

**Reactivity:** Streptococcus sp.

Host: Rabbit

Clonality: Polyclonal

Immunogen: Streptococci, group A

**Specificity:** This antibody reacts to a type specific carbohydrate of group A Streptococcus. Does not react

with other Strep groups.

**Formulation:** 0.01M PBS, pH 7.2 containing 0,09% sodium azide

State: Aff - Purified State: Liquid purified Ig

**Concentration:** lot specific

**Purification:** Affinity chromatography

Conjugation: Unconjugated

Storage: Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.

Avoid repeated freezing and thawing.

**Stability:** Shelf life: one year from despatch.

## Background:

The genus Streptococcus is comprised of a wide variety of both pathogenic and commensal gram positive bacteria which are found to inhabit a wide range of hosts, including humans, horses, pigs and cows. Within the host, streptococci are often found to colonize the mucosal surfaces of the mouth, nose and pharynx.

Streptococci can be divided into many groups on the basis of antigenic differences in group-specific polysaccharides located in the bacterial cell wall. More than 20 serologic groups have been identified and designated by letters, eg, A, B, C.

Group A streptococci, cause a wide-range of disease in humans, from mild sore throats to life-threatening invasive disease such as necrotising fasciitis. Streptococcus pyogenes (a group A Streptococcus) is one of the most important pathogens encountered in clinical practice.

Group A streptococci (GAS) are gram-positive, nonmotile, non-spore-forming organisms that appear as pairs or short-to-moderate-sized chains.

Group A organisms can be identified by enzyme immunoassays.
