CD22 Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: ELISA, WB

Recommended Dilution: Indirect ELISA: To detect hCD22 (using 100 μl/well antibody solution) a concentration of

0.5 - $2.0 \mu g/ml$ of this antibody is required. In conjunction with compatible secondary reagents, it allows the detection of at least 0.2 - $0.4 \mu g/mel$ of recombinant hCD22.

Sandwich ELISA: To detect hCD22 (using 100 μ l/well antibody solution) a concentration of 0.5 - 2.0 μ g/ml of this antibody is required. In conjunction with Biotinylated Anti-Human CD22 as a detection antibody, it allows the detection of at least 0.2 - 0.4 ng/well of recombinant

hCD22.

Western blot: To detect hCD22 this antibody can be used at a concentration of 0.1 - 0.2 μ g/ml. Used in conjunction with compatible secondary reagents the detection limit for recombinant hCD22 is 1.5 - 3.0 μ g/lane, under either reducing or non-reducing conditions.

Reactivity: Human

Host: Rabbit

Clonality: Polyclonal

Immunogen: Highly pure (> 98 %), CHO cells-derived, 75.0 kDa recombinant human CD22

Specificity: This antibody detecs CD22.

Formulation: PBS, pH 7.2 without preservatives.

State: Aff - Purified

State: Sterile filtered lyophilized Ig fraction

Reconstitution Method: Restore in sterile water to a concentration of 0.1 - 1.0 mg/ml.

Purification: Immunoaffinity chromatography

Conjugation: Unconjugated

Storage: Store lyophilized at 2-8°C for 6 months or at -20°C long term.

After reconstitution store the antibody undiluted at 2-8°C for one month

or (in aliquots) at -20°C long term. Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: CD22 molecule

CD22 Rabbit Polyclonal Antibody - AP01136PU-S

Database Link: Entrez Gene 933 Human

P20273

Background: CD22 is a type 1 integral membrane glycoprotein with molecular weight of 130 to 140kD. It is

expressed in both the cytoplasm and cell membrane of B lymphocytes. CD22 antigen appears

early in B cell lymphocyte differentiation at approximately the same stage as the CD19 antigen. Unlike other B cell markers, CD22 membrane expression is limited to the late differentiation stages comprised between mature B cells (CD22+) and plasma cells (CD22-), and may thus prove useful in phenotyping mature leukemias. CD22 is also strongly expressed in hairy cell leukemia. There are two different isoforms of CD22. It exists predominantly as a

monomer of the beta isoform but can also be found as a heterodimer composed of the beta

isoform and a second, shorter isoform (CD22 alpha).

Synonyms: SIGLEC2, Siglec-2, B-cell receptor CD22, Leu-14, BL-CAM

Note: Centrifuge vial prior to opening.
