Apolipoprotein E (APOE) (Isoform E3) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: ELISA, WB

Recommended Dilution: Indirect ELISA: To detect hApoE3 (using 100 µl/well antibody solution) a concentration of 0.5

- 2.0 µg/ml of this antibody is required. In conjunction with compatible secondary reagents, it

allows the detection of at least 0.2 - 0.4 ng/well of recombinant hApoE3.

Sandwich ELISA: To detect hApoE3 (using 100 μ l/well antibody solution) a concentration of 0.5 - 2.0 μ g/ml of this antibody is required. In conjunction with Biotinylated Anti-Human ApoE3 as a detection antibody, it allows the detection of at least 0.2 - 0.4 ng/well of

recombinant hApoE3.

Western blot: To detect hApoE3 this antibody can be used at a concentration of 0.1 - 0.2 µg/ml. Used in conjunction with compatible secondary reagents the detection limit for recombinant hApoE3 is 1.5 - 3.0 ng/lane, under either reducing or non-reducing conditions.

Reactivity: Human

Host: Rabbit

Clonality: Polyclonal

Immunogen: Highly pure (> 98%) E.coli derived, 34.4 kDa recombinant human ApoE3

Specificity: This antibody detects ApoE3.

Formulation: PBS, pH 7.2 without preservatives.

State: Aff - Purified

State: Sterile filtered lyophilized Ig fraction

Reconstitution Method: Restore in sterile water to a concentration of 0.1 - 1.0 mg/ml.

Purification: Immunoaffinity chromatography

Conjugation: Unconjugated

Storage: Store lyophilized at 2-8°C for 6 months or at -20°C long term.

After reconstitution store the antibody undiluted at 2-8°C for one month

or (in aliquots) at -20°C long term. Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: apolipoprotein E

Apolipoprotein E (APOE) (Isoform E3) Rabbit Polyclonal Antibody – AP01142PU-N

Database Link: Entrez Gene 348 Human

P02649

Background: Apolipoprotein E is essential for the normal catabolism of triglyceride rich lipoprotein

constituents. The apolipoprotein E gene is mapped to chromosome 19 in a cluster with APOC1 and APOC2. Defects in Apolipoprotein E result in familial dysbetalipoproteinemia, or type III hyperlipoproteinemia (HLP III), in which increased plasma cholesterol and triglycerides are the consequence of impaired clearance of chylomicron and VLDL remnants. Mutations in

the APOE gene confer susceptibility to Alzheimer's disease by affecting amyloid-beta

deposition.

Synonyms: ApoE, Apo-E

Note: Centrifuge vial prior to opening.
