AP2 gamma (TFAP2C) Rabbit Polyclonal Antibody - AP01241PU-M

Background:

AP2 gamma is a sequence-specific DNA-binding protein that interacts with inducible viral and cellular enhancer elements to regulate transcription of selected genes. AP-2 factors bind to the consensus sequence 5'-GCCNNNGGC-3' and activate genes involved in a large spectrum of important biological functions including proper eye, face, body wall, limbs and neural tube development. They also suppress a number of genes including MCAM/MUC18, C/EBP alpha and MYC.

Synonyms:

Transcription factor AP2 gamma, ERF-1, ERF1
