# Product datasheet for AP01253PU-M

## EDG2 (LPAR1) Rabbit Polyclonal Antibody

## **Product data:**

Product Type:	Primary Antibodies
Applications:	IHC, WB
Recommended Dilution:	Western Blot: 1/500-1/1000. Immunohistochemistry on Paraffin Sections: 1/50-1/200. Immunofluorescence: 1/50-1/200.
Reactivity:	Human, Rat
Host:	Rabbit
Clonality:	Polyclonal
Immunogen:	Synthetic peptide, corresponding to amino acids 10-62 of Human EDG-2.
Specificity:	This antibody detects endogenous levels of EDG-2 protein. (region surrounding Trp45)
Formulation:	Phosphate buffered saline (PBS), pH~7.2 State: Aff - Purified State: Liquid purified Ig fraction (> 95% pure by SDS-PAGE). Preservative: 0.05% Sodium Azide
Concentration:	1.0 mg/ml
Purification:	Affinity Chromatography using epitope-specific immunogen.
Conjugation:	Unconjugated
Storage:	Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: One year from despatch.
Predicted Protein Size:	~38 kDa
Gene Name:	lysophosphatidic acid receptor 1
Database Link:	<u>Entrez Gene 1902 Human</u> <u>Q92633</u>

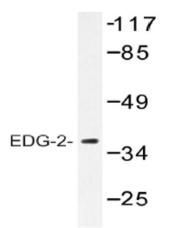

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2025 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### CRIGENE EDG2 (LPAR1) Rabbit Polyclonal Antibody – AP01253PU-M

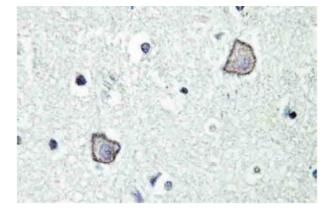

Background:The EDG (endothelial differentiation gene) family of G protein-coupled receptors consists of<br/>eight family members that bind lysophospholipid (LPL) mediators, including sphingosine-1-<br/>phosphate (SPP) and lysophosphatidic acid (LPA). EDG-1, EDG-3, EDG-5 (also designated H218<br/>and AGR16) and EDG-8 bind SPP with high affinity. EDG-6 is a low affinity receptor for SPP.<br/>LPA preferentially binds to EDG-2, EDG-4 and EDG-7. The EDG receptors couple to multiple G<br/>proteins to signal through Ras, MAP kinase, Rho, Phospholipase C or other tyrosine kinases,<br/>which lead to cell survival, growth, migration and differentiation. EDG-1 signals through Gi<br/>proteins to activate Akt and is expressed in glioma cells. EDG-2 is expressed in brain,<br/>especially in white matter tract regions, while EDG-3 is expressed in cardiovascular tissue and<br/>in cerebellum. EDG-4 is highly expressed on leukocytes and brain, and EDG-5 has wide tissue<br/>distribution, including cardiovascular tissue and brain. Expressed in lymphoid and<br/>hematopoietic tissues and in lung, EDG-6 signals through Gi/o proteins, which activate growth<br/>related pathways.

Synonyms: LPAR1, EDG2, LPA1, LPA receptor 1, LPA-1
