GABA B Receptor 1 (GABBR1) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: IF, WB

Recommended Dilution: Western blot: 1/500-1/1000.

Immunofluorescence: 1/50-1/200.

Reactivity: Human, Mouse, Rat

Host: Rabbit

Clonality: Polyclonal

Immunogen: Synthetic peptide, corresponding to amino acids 930-950 of Human GABAB R1.

Specificity: This antibody detects endogenous levels of GABBR1 protein (region surrounding Pro931).

Formulation: Phosphate buffered saline (PBS), pH 7.2.

State: Aff - Purified

State: Liquid purified Ig fraction Preservative: 0.05% Sodium azide

Concentration: 1.0 mg/ml

Purification: Affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-

PAGE)

Conjugation: Unconjugated

Storage: Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer.

Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Predicted Protein Size: ~ 110 kDa

Gene Name: gamma-aminobutyric acid type B receptor subunit 1

Database Link: Entrez Gene 54393 MouseEntrez Gene 81657 RatEntrez Gene 2550 Human

Q9UBS5

Background:

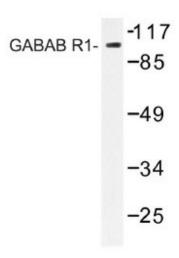

GAD-65 and GAD-67, glutamate decarboxylases of 65 kDa and 67 kDa, respectively, function to catalyze the production of GABA (gamma-aminobutyric acid). In the central nervous system GABA (gamma-aminobutyric acid) functions as the main inhibitory transmitter by increasing a Cl-conductance that inhibits neuronal firing. GABA has been shown to activate both ionotropic (GABAA) and metabotropic (GABAB) receptors as well as a third class of receptors called GABAC. Both GABAA and GABAC are ligand-gated ion channels, however, they are structurally and functionally distinct. Members of the GABAA receptor family include GABAA R α 1-6, GABAA R β 1-3, GABAA R α 5, GABAA R α 7-3, GABAA R α 91 and GABAA R α 92. The GABAB family is composed of GABAB R1 α and GABAB R1 α 5. GABA transporters have also been identified and include GABA T-1, GABA T-2 and GABA T-3 (also designated GAT-1, -2, and -3). The GABA transporters function to terminate GABA action.

Synonyms: GABA-B receptor 1, GABA-B-R1, GABA-BR1, Gb1, GPRC3A

Protein Families: Druggable Genome, GPCR, Secreted Protein, Transmembrane

Protein Pathways: Neuroactive ligand-receptor interaction
