Product Type:	Primary Antibodies
Applications:	ELISA, WB
Recommended Dilution:	Western Blot: 1/500-1/1000.
Reactivity:	Human, Mouse, Rat
Host:	Rabbit
Clonality:	Polyclonal
Specificity:	A Cyclase IV antibody detects endogenous levels of A Cyclase IV protein. (region surrounding Leu226)
Formulation:	Phosphate buffered saline (PBS) with 0.05% sodium azide, approx. pH 7.2. State: Aff - Purified State: Liquid purified Ig fraction (> 95% pure by SDS-PAGE)
Concentration:	1.0 mg/ml
Purification:	Affinity chromatography
Conjugation:	Unconjugated
Storage:	Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Predicted Protein Size:	~ 120 kDa
Gene Name:	adenylate cyclase 4
Database Link:	<u>Entrez Gene 196883 Human</u> <u>Q8NFM4</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

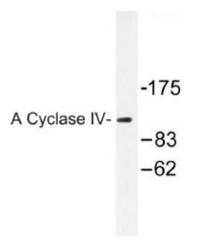

### **GRIGENE** ADCY4 Rabbit Polyclonal Antibody – AP01506PU-N

Background:Adenylyl cyclases function to convert ATP to cyclic AMP in response to activation by a variety<br/>of hormones, neurotransmitters and other regulatory molecules. Cyclic AMP, in turn, activates<br/>several other target molecules to control a broad range of diverse phenomena such as<br/>metabolism, gene transcription and memory. Adenylyl cyclases respond to receptor-initiated<br/>signals, mediated by the Gs and Gi heterotrimeric G proteins. The binding of an agonist to a<br/>Gs-coupled receptor catalyzes the exchange of GDP (bound to Gα s) for GTP, the dissociation<br/>of GTP-Gα s from Gβγ and Gα s-mediated activation of adenylyl cyclase. Adenylyl cyclase IV<br/>(AC IV) and IX mRNA are expressed in all kidney nephron segments. AC IV exhibits moderate<br/>staining in type II and type IV fibrocytes in rat cochlea and immunoreactivity is also observed<br/>in type I fibrocytes. Activation of the D2 dopaminergic and m4 muscarine receptors inhibits<br/>the activity of adenylyl cyclase isozymes I, V, VI and VIII, whereas type II, IV and VII are<br/>stimulated and type III is not affected.

Synonyms:

Adenylate cyclase type IV, Adenylyl cyclase 4, ADCY4
