

Product datasheet for AP01641PU-M

NFkB p100 / p52 (NFKB2) pSer865 Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies ELISA, IHC, IP, WB **Applications:** Recommended Dilution: ELISA: 1/20000-1/40000. Western Blot: 1/500-1/1000. Immunohistochemistry: 1/50-1/200. Immunoprecipitation: 1/50-1/200. **Reactivity:** Human, Mouse Host: Rabbit **Clonality:** Polyclonal Specificity: This antibody detects endogenous levels of NFkB-p100/p52 pSer865 protein. Formulation: Phosphate buffered saline (PBS), pH~7.2 containing 15 mM Sodium Azide as preservative. State: Aff - Purified State: Liquid purified Ig fraction (> 95% pure by SDS-PAGE). **Concentration:** 1.0 mg/ml **Purification:** Affinity Chromatography using epitope-specific immunogen. **Conjugation:** Unconjugated Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Storage: Avoid repeated freezing and thawing. Stability: Shelf life: One year from despatch. Gene Name: nuclear factor kappa B subunit 2 Database Link: Entrez Gene 4791 Human 000653

	NFkB p100 / p52 (NFKB2) pSer865 Rabbit Polyclonal Antibody – AP01641PU-M
Background:	The NFkB transcription factor was originally identified as a protein complex consisting of a DNA binding subunit and an associated protein. The DNA binding subunit is functionally related to c-Rel p75 and Rel B p68. The p50 subunit was initially believed to be a functionally unique protein derived from the amino-terminus of a precursor designated p105. A cDNA has been isolated that encodes an alternative DNA binding subunit of NFkB. It is synthesized as a protein that is expressed in a variety of cell types and, like p105, undergoes cleavage to generate its NFkB subunit, in this case a protein designated p52 (previously referred to as p49). In contrast to p50 derived from p105, p52 acts in synergy with p65 to stimulate the HIV enhancer in transiently transfected Jurkat cells.

Synonyms: LYT10, KBF2, H2TF1, NF-kB p100, NF-kB p52, NF kappa B
