Background: Thymosin beta-4 was shown to be essential for all aspects of coronary vessel development in mice; it stimulates significant outgrowth from quiescent adult epicardial explants, restoring pluripotency and triggering differentiation of fibroblasts, smooth muscle cells, and endothelial cells.

Synonyms: T beta-4, TMSB4X, TB4X, THYB4, TMSB4, Seraspenide

Note: LocusID 7114

ELISA: Standard curve showing measurement of Thymosin beta-4 in a competitive Immunoassay using AP02233SU. OD was determined at 450 nm. The shown standard curve is for demonstration purposes only and can be influenced by Buffer, incubation conditions or dilution of the conjugate.

Immunohistochemistry using AP02233SU Thymosin beta-4 Antibody: Staining of Paraffin Sections of breast cancer tissue. Sections were incubated with AP02233SU (1/200) for 2 h followed by incubation with Alexa488 Goat anti rabbit antibody (1/400). The section were stained for DNA using bis-Benzimide Image A: AP02233SU stains scattered tumor cells strongly. Image B: Antiserum preabsorbed with the antigen does not stain the tumor tissue.
