c-Jun (JUN) pThr239 Rabbit Polyclonal Antibody

Product data:

Clonality:

Product Type: Primary Antibodies

Applications: IF, IHC, WB

Recommended Dilution: Western blot: 1/500 - 1/1000; Incubate membrane with diluted antibody in 5% nonfat milk,

1X TBS, 0,1% Tween-20 at 4°C with gentle shaking, overnight. **Immunohistochemistry on paraffin sections:** 1/50 - 1/100.

Immunofluorescence: 1/100 - 1/200.

Reactivity: Human, Mouse

Host: Rabbit

Immunogen: Synthetic phosphopeptide derived from human c-Jun around the phosphorylation site of

threonine 239 (G-E-TP-P-P).

Specificity: c-Jun (phospho-Thr239) antibody detects endogenous levels of c-Jun only when

phosphorylated at threonine 239.

Formulation: Phosphate buffered saline (without Mg2+ and Ca2+), pH 7.4, 150 mM NaCl containing 0.02%

Sodium Azide as preservative and 50% glycerol as stabilizer

State: Aff - Purified

State: Liquid purified Ig fraction

Concentration: lot specific

Purification: Immunoaffinity chromatography

Polyclonal

Conjugation: Unconjugated

Storage: Store the antibody (in aliquots) at -20°C.

Avoid repeated freezing and thawing.

Stability: Shelf life: One year from despatch.

Gene Name: Jun proto-oncogene, AP-1 transcription factor subunit

Database Link: Entrez Gene 3725 Human

P05412

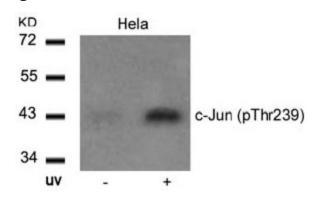

Background:

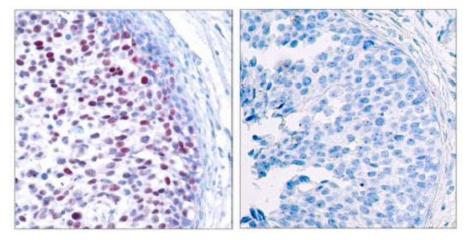

The human protooncogene JUN is the putative transforming gene of avian sarcoma virus 17, and it encodes a protein which is highly homologous to the viral protein. cJun (previously known as the Fos binding protein p39) and c Fos form a complex in the nucleus. AP 1 (activating protein 1) is a collective term referring to these dimeric transcription factors composed of Jun, Fos or ATF subunits that bind to a common DNA site, the AP1 binding site. AP 1 proteins, mostly the Jun group, regulate the expression and function of cell cycle regulators such as Cyclin D1, p53, p21 (cip1/waf1), p19 (ARF) and p16. Fos and Jun proto oncogene expression is induced transiently by a variety of extracellular stimuli associated with mitogenesis, differentiation processes or depolarization of neurons. JUN has been mapped to 1p32 to p31, a chromosomal region involved in both translocations and deletions in human malignancies.

Synonyms: Transcription factor AP1
