GRIA1 pSer849 Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: WE

Recommended Dilution: Western Blot: 1:500~1:1000.

Reactivity: Human, Mouse

Host: Rabbit
Clonality: Polyclonal

Immunogen: The antiserum was produced against synthesized phosphopeptide derived from human

GluR1 around the phosphorylation site of serine 849 (Q-Q-SP-I-N).

Specificity: GluR1 Antibody detects endogenous levels of GluR1 only when phosphorylated at serine 849.

Formulation: PBS(without Mg2+ and Ca2+), pH 7.4 containing 150mM NaCl, 0.02% sodium azide and 50%

glycerol

State: Aff - Purified

State: Liquid purified IgG

Concentration: lot specific

Purification: The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using

epitope-specific phosphopeptide. The antibody against non-phosphopeptide was removed by

chromatography using non-phosphopeptide corresponding to the phosphorylation site.

Conjugation: Unconjugated

Storage: Store the antibody at -20°C.

Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: glutamate ionotropic receptor AMPA type subunit 1

Database Link: Entrez Gene 2890 Human

P42261

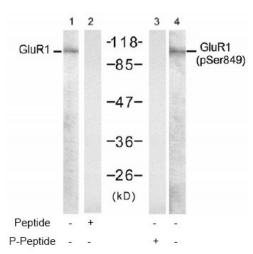

Background:

Glutamate dehydrogenase has a central role in nitrogen metabolism in plants and animals. Glutamate dehydrogenase is found in all organisms and catalyzes the oxidative deamination of 1-glutamate to 2-oxoglutarate. Glutamate, the main substrate of Glutamate dehydrogenase, is present in brain in concentrations higher than in other organs. In nervous tissue, Glutamate dehydrogenase appears to function in both the synthesis and the catabolism of glutamate and perhaps in ammonia detoxification.

Synonyms:

GluR-1, GRIA1, GLUH1, GluR-A, GluR-K1, Glutamate receptor ionotropic, AMPA1
