

# Product datasheet for AP02528PU-N

# PKR (EIF2AK2) pThr451 Rabbit Polyclonal Antibody

## **Product data:**

#### **Product Type: Primary Antibodies** IHC **Applications: Recommended Dilution:** Immunohistochemistry: 1:50~1:100. **Reactivity:** Human Rabbit Host: **Clonality:** Polyclonal Immunogen: The antiserum was produced against synthesized phosphopeptide derived from human PKR around the phosphorylation site of threonine 451 (K-G-TP-L-R). Specificity: PKR antibody detects endogenous levels of PKR only when phosphorylated at threonine 451. Formulation: PBS(without Mg2+ and Ca2+), pH 7.4 containing 150mM NaCl, 0.02% sodium azide and 50% glycerol State: Aff - Purified State: Liquid purified IgG **Concentration:** lot specific **Purification:** The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific phosphopeptide. The antibody against non-phosphopeptide was removed by chromatography using non-phosphopeptide corresponding to the phosphorylation site. **Conjugation:** Unconjugated Storage: Store the antibody at -20°C. Avoid repeated freezing and thawing. Stability: Shelf life: one year from despatch. eukaryotic translation initiation factor 2 alpha kinase 2 Gene Name: Database Link: Entrez Gene 5610 Human P19525

### **PKR (EIF2AK2) pThr451 Rabbit Polyclonal Antibody – AP02528PU-N**

Background:PKR is an interferon-inducible serine/threonine specific protein kinase. It is widely expressed<br/>in eukaryotic organisms and activated by double stranded RNA. Activation of PKR by dsRNAs<br/>leads to autophosphorylation at multiple sites. Phosphorylation of Thr446 and Thr451 in the<br/>PKR activation loop is required in vivo and in vitro for high level kinase activity. PKR<br/>phosphorylates its natural substrate, the alpha subunit of eukaryotic protein synthesis<br/>initiation factor 2 (EIF2 alpha), leading to the inhibition of protein synthesis. PKR is also<br/>involved in TLR signaling and mediates apoptosis in fibroblasts in response to viral infection<br/>and inflammatory cytokines, and also activates IKK and NFKB, thereby suppressing apoptosis.<br/>Recently, it has been reported that PKR also phosphorylates human p53 on serine 392.<br/>PKR might play a role in ER stress-induced apoptosis and in Alzheimer's disease. Alzheimer<br/>cases show prominent PKR activation in association with neuritic plaques and pyramidal<br/>neurons in the hippocampus and neocortex.

Synonyms:

elF-2A protein kinase 2, PRKR
