

Product datasheet for AP02531PU-N

MARCKS pSer158 Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: IF, WB

Recommended Dilution: Western Blot: 1/500-1/1000.

Immunofluorescence: 1/100-1/200.

Reactivity: Human, Mouse, Rat

Host: Rabbit

Polyclonal Clonality:

The antiserum was produced against synthesized phosphopeptide derived from human Immunogen:

MARCKS around the phosphorylation site of serine 158 (R-F-SP-F-K).

Specificity: This antibody detects endogenous levels of MARCKS only when phosphorylated at Serine

158.

Formulation: PBS (without Mg2+ and Ca2+), pH 7.4, 150 mM NaCl, 0.02% Sodium Azide and 50% Glycerol.

State: Aff - Purified

State: Liquid purified Ig fraction.

Concentration: lot specific

Purification: Affinity Chromatography using epitope-specific phosphopeptide. The antibody against non-

phosphopeptide was removed by chromatogramphy using non-phosphopeptide

corresponding to the phosphorylation site.

Conjugation: Unconjugated

Storage: Store the antibody (in aliquots) at -20°C.

Avoid repeated freezing and thawing.

Stability: Shelf life: One year from despatch.

Gene Name: myristoylated alanine rich protein kinase C substrate

MARCKS pSer158 Rabbit Polyclonal Antibody - AP02531PU-N

Background: MARCKS, (Myristoylated Alanine-Rich C Kinase Substrate), is a member of a family of

calmodulin binding proteins and is a major substrate for phosphorylation by protein kinase ${\sf C}$

(PKC). The phosphorylation of Ser152/156 can be used as a measure of PKC activation. Phosphorylation of Ser152/156 modulates the binding of MARCKS to calmodulin.

Synonyms: Myristoylated alanine-rich C-kinase substrate, MACS, PRKCSL
